Synthesis

Who is delivering the Airbus data?

Airbus GO5

is the Airbus focal point for training operators and simulators manufacturers

Missions:

- ▶ Allow development and qualification of Flight Simulation Training Devices (FSTD)
- ▶ No “Negative Training”: Ensure training of quality
- ▶ Propose innovations to address training needs

GO5 deliveries: Aircraft or training specifics?

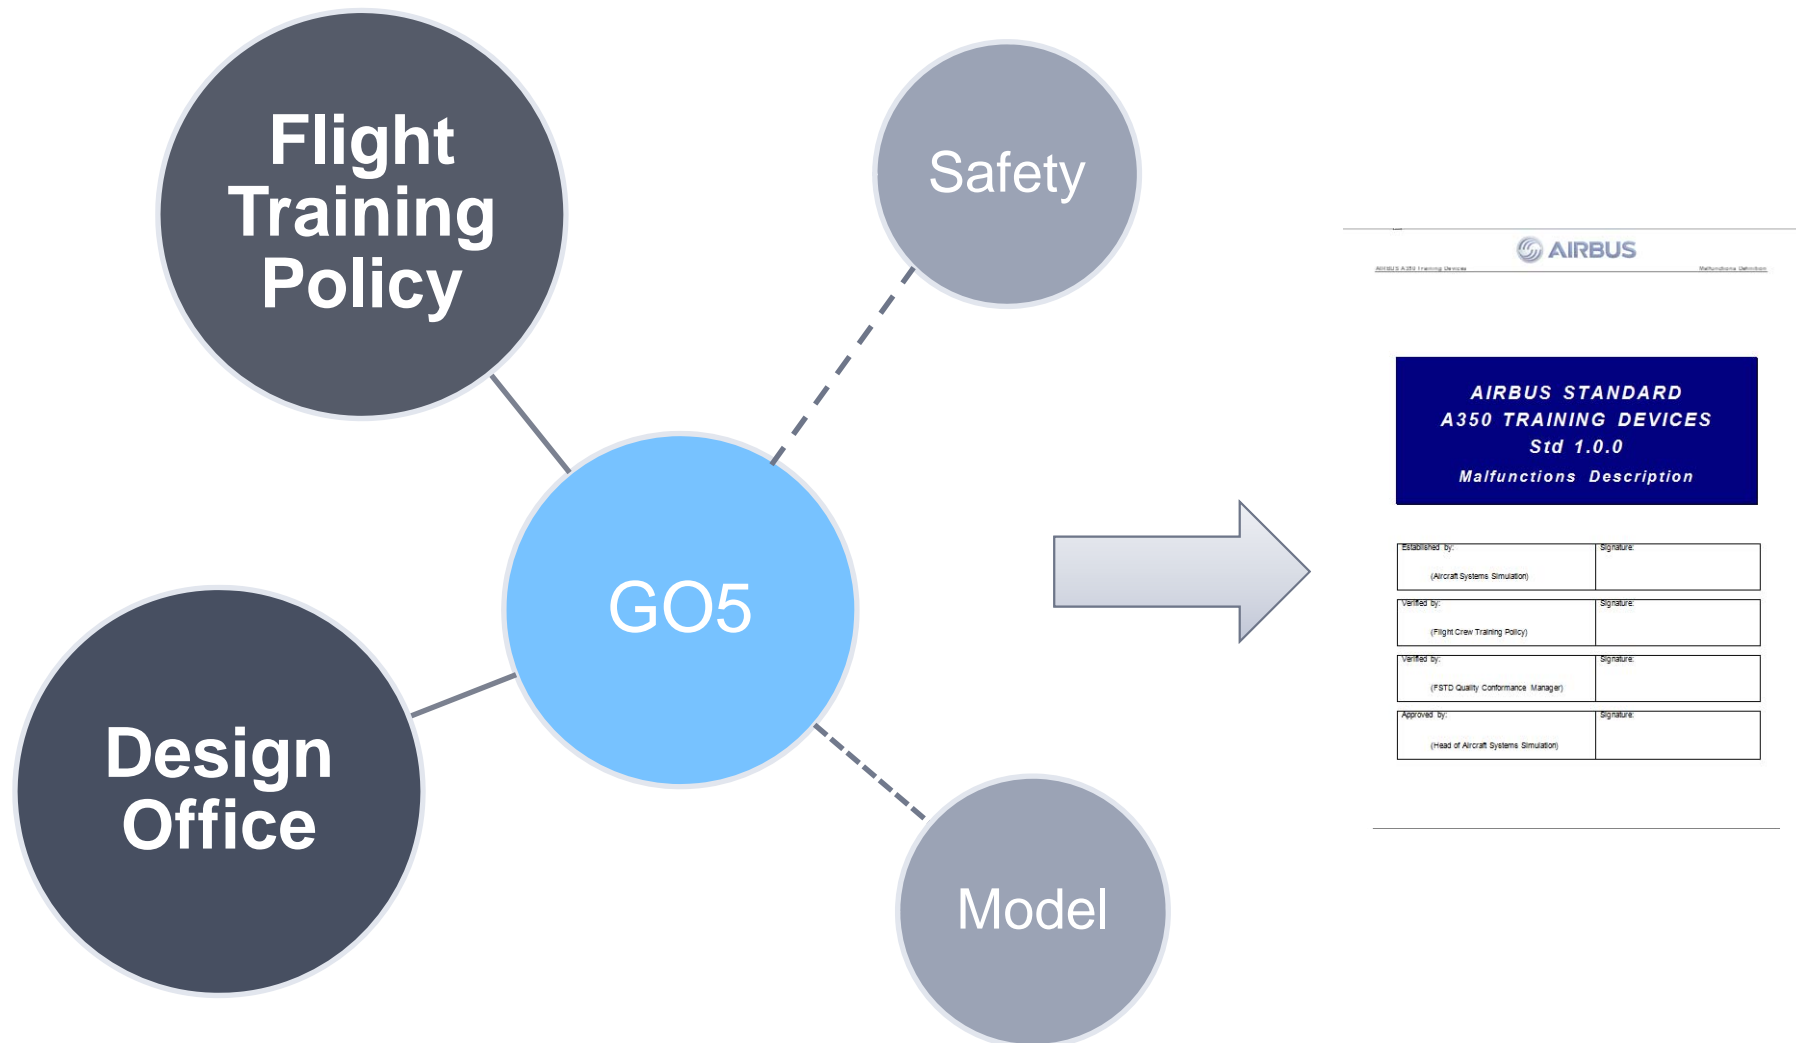

Data package is based on our
Aircraft know-how

But there are some
specific training needs...

Malfunctions

Malfunctions definition process

Feedbacks from customers

➤ Some proposals are added:

ATA 70 – ENGINE

MALFUNCTION : BIRD INGESTION

ENG 1 (2)

AIRCRAFT : A350

CAUSE : Bird ingestion

CONSEQUENCES:

During take-off all engine parameters move erratically lower and upper than in normal operation.

- EGT fluctuates without exceeding over limit,
- N1 vibration level reaches advisory,
- Motion effects take place (FFS Only),
- Sound effects take place (FFS Only),
- Single Chime sounds,
- MASTER CAUT lights illuminate,
- WD displays message: **ENG 1(2) STALL**
ENG 1(2) N1 HIGH VIBRATIONS
- Dispatch page display messages
ENG 1(2) STALL
 > ENG 1(2) STALL
ENG 1(2) N1 HIGH VIBRATIONS
 > ENG 1(2) N1 HIGH VIBRATIONS

Then after 30 seconds:

- Stall effects disappear,
- N1 vibrations and EGT return to nominal operation.

Cancelling the malfunction restores normal engine performance.

➤ And some are not :

No training added value (e.g. gear collapse) up to risks of **negative training**

Stall Buffet Model

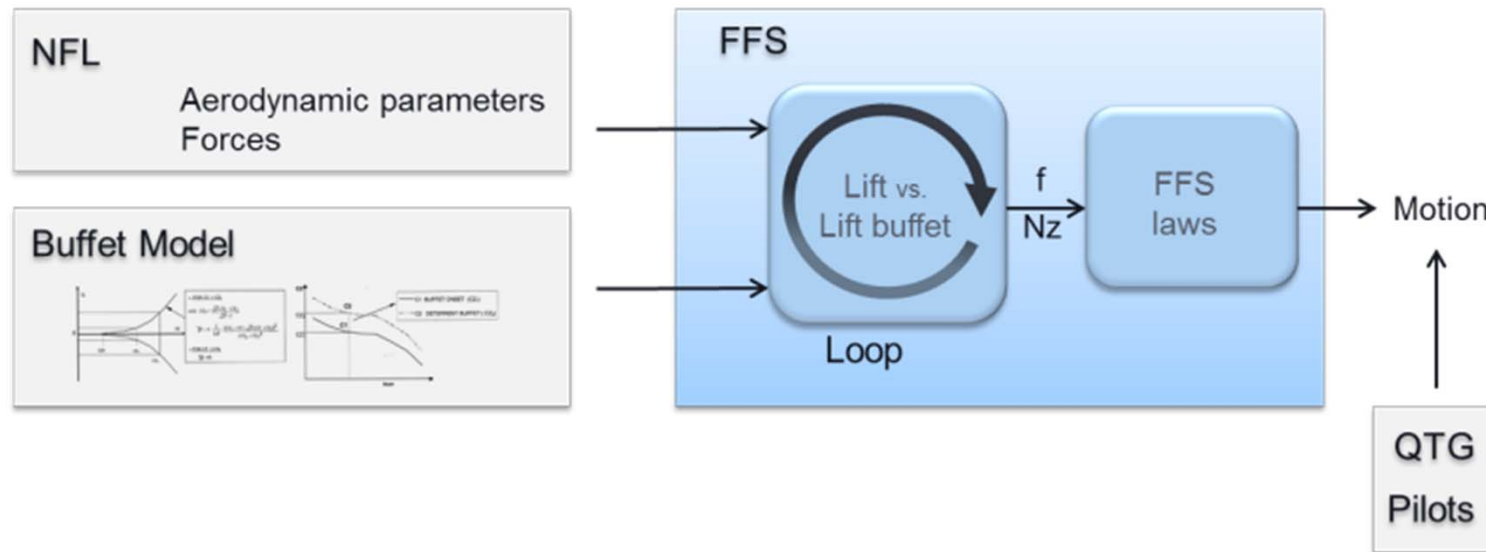

Stall buffet model description – A320, A330, A380

- “Technical Note **Buffeting Model** for Flight Training Simulator” document

- Tables and equations of CZ_0 , CZ_1 , CZ_2

Stall buffet model integration – A320, A330, A380

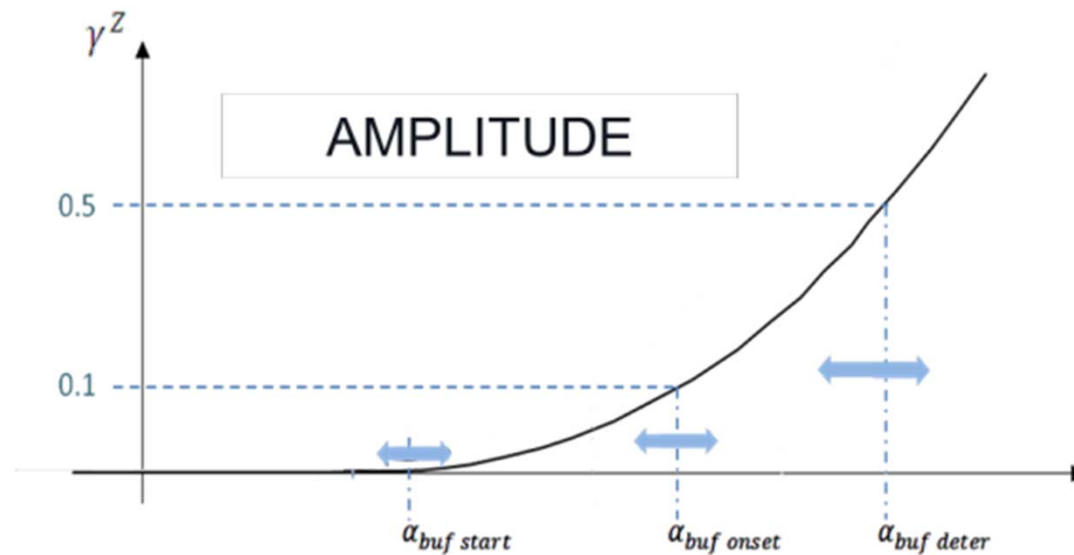

But...

- Up to the stall
- Difficult to release updates
- Difficult to support **subjective pilot assessment**

Stall buffet model description – A350

➤ Model embedded within Simulation Software Package (SSP)

Start
>0.015g

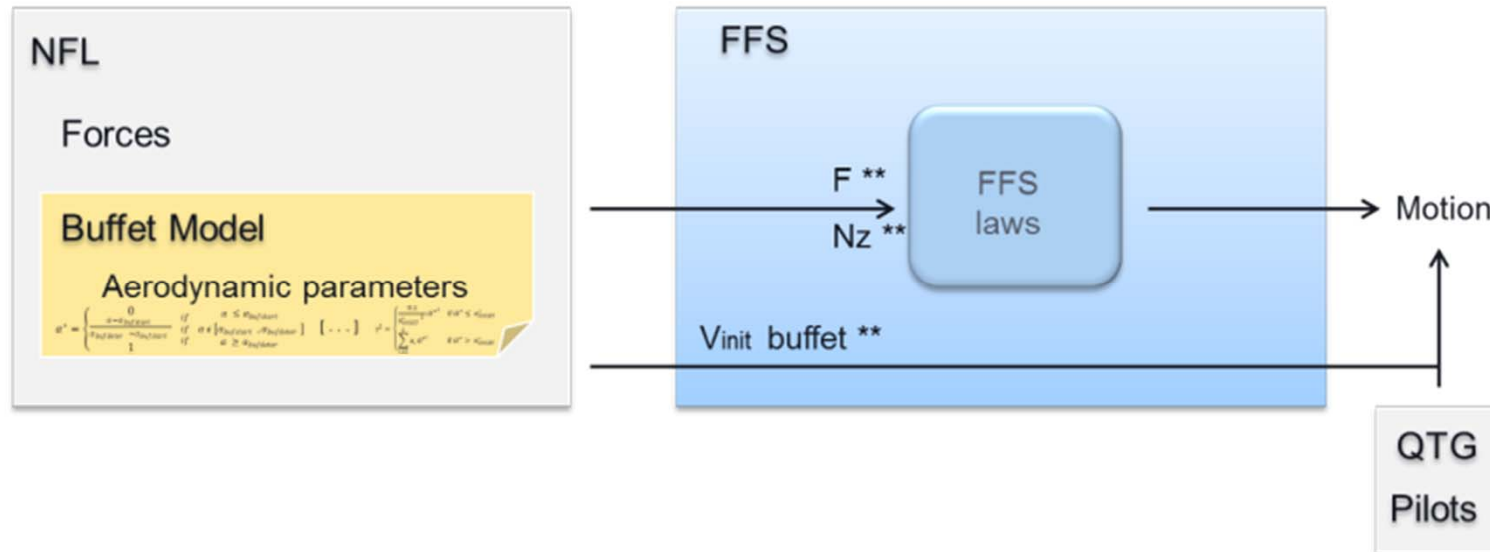

Onset
>0.1g

Deterrent
>0.5g

Inside aero model

$$\gamma^2 = \begin{cases} 0 & \text{if } \alpha \leq \alpha_{buf\ start} \\ \frac{\alpha - \alpha_{buf\ start}}{\alpha_{buf\ deter} - \alpha_{buf\ start}} & \text{if } \alpha \in [\alpha_{buf\ start}, \alpha_{buf\ deter}] \\ 1 & \text{if } \alpha \geq \alpha_{buf\ deter} \end{cases} \quad [\dots] \quad \gamma^2 = \begin{cases} \alpha_{ONSET}^2 & \text{if } \alpha \leq \alpha_{ONSET} \\ \sum_{i=1}^3 a_i \alpha^i & \text{if } \alpha > \alpha_{ONSET} \end{cases}$$

Stall buffet model integration – A350

- Alpha envelope limited
- Updated with feedbacks from flight test pilots
- Proof of match:
 - ✓ Internally validated vs F/T. Check out tests.
 - ✓ $2c8=3g5 \rightarrow$ Objective point of view for FFS tuning

Synthesis

The Data Package provides maximum aircraft know-how as possible

For specific training needs, GO5 could bring you additional information

Data keeps evolving: Be part of it!
